

Agrifuture

Agrifuture – the Future of Agriculture:

This topic combines all disciplines of Geography and only increases in importance as droughts get worse, grain becomes geopolitical and biodiversity gets less.

As EGEA we can use our geographical gaze to promote a holistic approach to large scale problems.

At the same time we can work on small scale solutions together.

From learning how to grow your own zucchinis to revolutionizing remote sensing in agriculture, the topic of Agrifuture offers endless possibilities for EGEAns to explore in 2024!
